TITAN Technology Partners Completes SAS 70 Type II Audit for Third Consecutive Year

Charlotte, N.C. (February 16, 2009) – TITAN Technology Partners, a global provider of consulting and outsourced industry solutions, today announced it has successfully completed the American Institute of Certified Public Accountants' Statement on Auditing Standards (SAS) No.70 Type II audit for the third consecutive year. The SAS 70 audit assures the company's clientele that it maintains a consistent, stable and secure environment for the services it provides. Furthermore, the successful completion of a SAS 70 audit satisfies federal regulations including Gramm-Leach-Bliley, Sarbanes-Oxley, and the Health Insurance Portability and Accountability Act (HIPAA) that require corporations to audit the internal controls of their suppliers.

The SAS 70 Type II report helps TITAN's clients comply with Sarbanes-Oxley requirements. The SAS 70 Type II report indicates that control objectives, specified by TITAN related to hosting and managing customers' enterprise applications, have been independently reviewed and tested to ascertain design and operating effectiveness.

"TITAN Technology Partners continues to meet our commitment to serve our clients with sound internal controls, and we will maintain our voluntary compliance with the SAS 70 audit as a key strategic component of our continued success with security-sensitive and regulated organizations," said Vincent D'Orazio, TITAN's Executive Vice President of Global Services. "As we continue to serve our clients globally, we take great pride in the tools and processes we use to manage our client's enterprise systems and continued validation through rigorous third-party testing."

SAS 70 is an internationally recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA) indicating that an organization has been through an in-depth review or audit of their internal controls and processes. For public companies required by Sarbanes-Oxley to report on controls over financial reporting, SAS 70 is a preferred reporting standard for partnering with service organizations. Service organizations like TITAN Technology Partners, who manage customer's financial data, are viewed as extensions of the companies they serve, as interpreted under Sarbanes-Oxley, and therefore must meet rigorous internal control standards.
